kDFUApp is an easy way to get into kDFU mode
simply activate all switches and press the button

Currently compatible with:

iPhone3,1 / iPhone3,2 / iPhone3,3 /
iPhone4,1 / iPhone5,1 / iPhone5,2 /
iPhone5,4

iPad2,1 / iPad2,2 / iPad2,3 / iPad3,1 /
iPad3,3

INTRODUCTION

Now V2.17 3uTools supports downgrading iPhone 4s and iPad 2 to iOS 6.1.3 after jailbreak without SHSH.
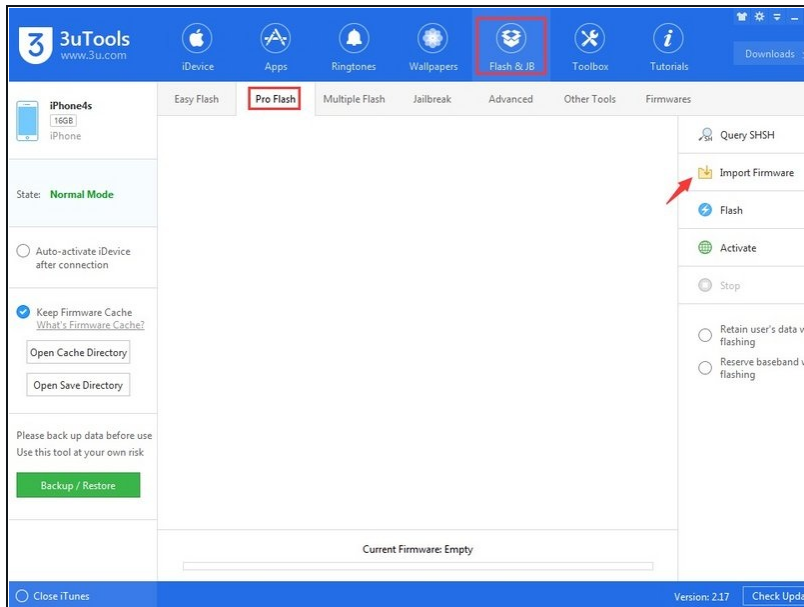

Step 1 — Enter kDFU mode

- Launch Cydia and add repo: http://repo.tihmstar.net to enter KDFU mode (Please check the detailed tutorial). Only when your iDevice is in KDFU mode, you can downgrade to iOS 6.1.3. Please make sure your iDevice is in KDFU mode, then continue to downgrade.

## Step 2 — Download custom firmware.

- Download the corresponding custom firmware for your iDevice; http://www.3u.com/tutorial/articles/4207...
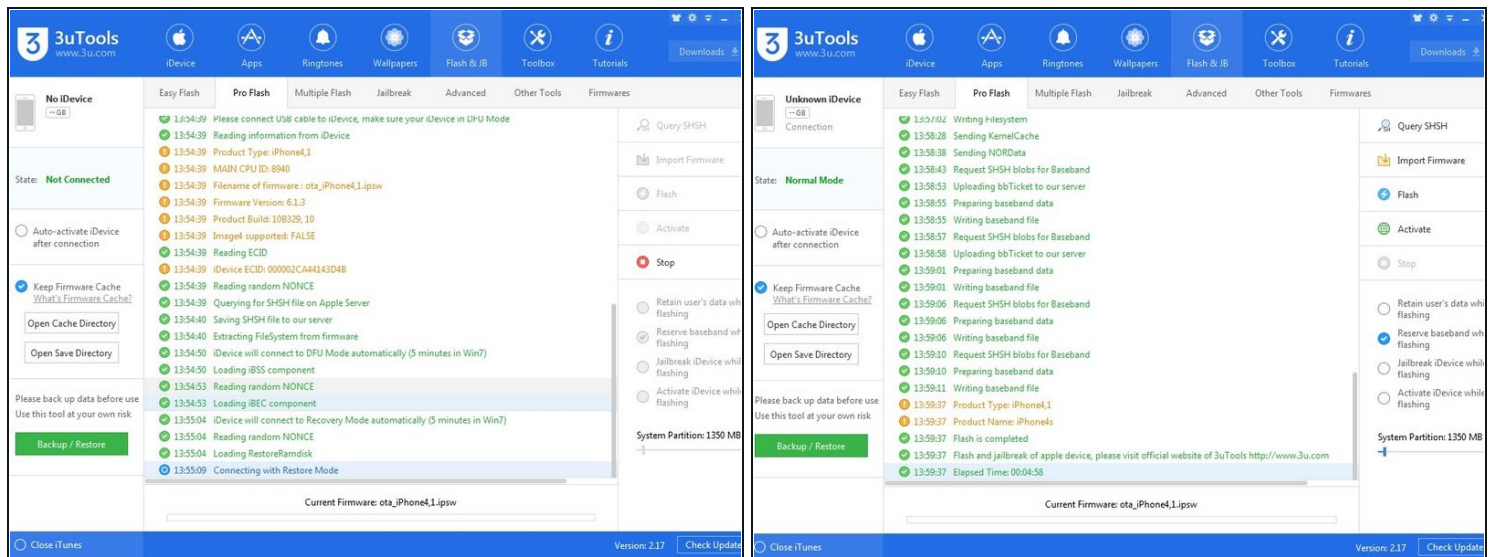

Step 3 — 3uTools proflash

- Launch 3uTools and go to **"Flash & JB"** -> **"Pro Flash"**, click **"Import Firmware"** and select the firmware you have already downgraded.
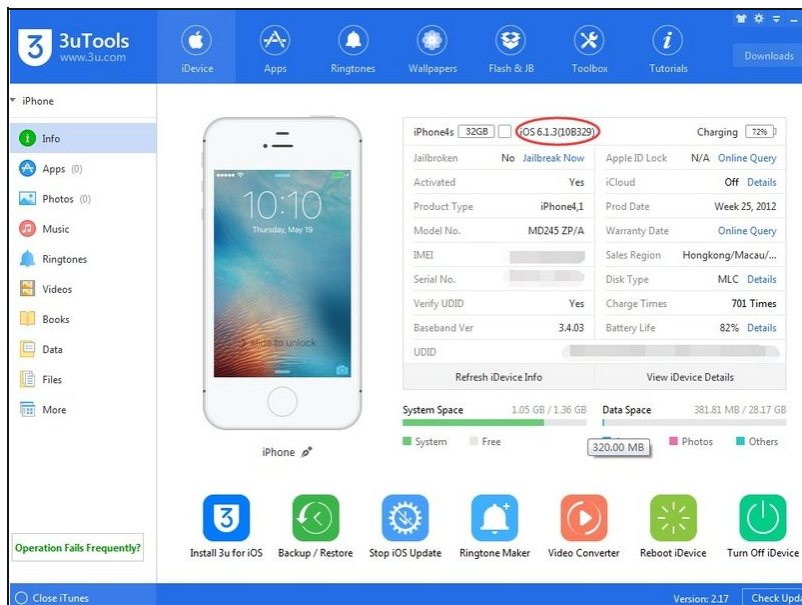

Step 4 — Go "Flash"

- After you import the firmware, click **"Flash"** on the right bar.

Step 5 — Wait till the process is finished

- Now 3uTools will automatically flash your iDevice, please confirm the connection between your iDevice and pc.

Step 6 — Finish

- Normally, it would take around 10 minutes to downgrade.

To reassemble your device, follow these instructions in reverse order.
