

iMac G5 20" Model A1145 Camera Board Replacement

Replace the camera board to restore iSight...

Written By: Andrew Bookholt

INTRODUCTION

Replace the camera board to restore iSight functionality.

TOOLS:

Phillips #1 Screwdriver (1)

Plastic Cards (1)

T6 Torx Screwdriver (1)

TR8 Torx Security Screwdriver (1)

Step 1 — Access Door

- Orient the iMac face-side down on a table with the bottom edge facing yourself.
- Remove the two Phillips screws securing the access door to the bottom grille of your iMac.
- ⓘ The screws are captive in the access door.

 **Before beginning the repair, unplug the computer and press and hold the power switch for 20-30 seconds, to discharge internal capacitors.**

Step 2

- Remove the access door.

Step 3 — Front Bezel

- Remove the three T8 Torx screws securing the front bezel to the rear case along the lower edge of the iMac.

Step 4

- Turn the computer over.
- Use your thumbs to press both RAM arms in past the front bezel for enough clearance to lift it off the rear case.

Step 5

- While holding the RAM arms in with your thumbs, lift the lower edge of the front bezel enough to clear the rear case.

Step 6

- ① Re-orient your iMac so it sits upright on the stand.
- Insert a [plastic card](#) up into the corner of the air vent slot near the top of the rear case.
- Push the card toward the top of the iMac to release the front bezel latch.
- Pull the front bezel away from the rear case.
- Repeat this process for the other side of the front bezel.
- ① It may be necessary to apply several layers of duct tape to the top of the access card to aid in releasing the latches.
- If the bezel refuses to release, try pressing the lower edge back onto the rear case and repeat this opening process.
- ① Alternatively, you can use a strong magnet by holding it to the front top left/right corner of the display. You will hear a snapping sound when the hatch is released.

Step 7

- Lay your iMac stand-side down on a table.
- Lift the front bezel from its lower edge and rotate it away from the rest of your iMac, minding the RAM arms that may get caught.
- Lay the front bezel above the rest of the iMac.

Step 8

- If necessary, remove the piece of kapton tape wrapped around the microphone and camera connectors.

Step 9

- Disconnect both the camera and microphone cables.

Step 10 — Camera Board

- Lay the bezel front side down on a table.
- If necessary, peel back the tape covering the camera board.

Step 11

- Remove the two T6 Torx screws securing the camera board to the front bezel.

Step 12

- Lift the camera board out from the front bezel.

To reassemble your device, follow these instructions in reverse order.
