INTRODUCTION

This video demonstrates repair of the "floppy screen" issue, in which case the screen is relatively stable, but flops back and forth slightly. The repair involves tightening the screws on the screen hinge arms. This repair is relevant to many MacBooks, including the A1342 white unibody, as well as all 13" and 15" Pros made from 2008 to 2012.

TOOLS:

- [Screwdrivers -- dependent upon model MacBook \(1\)](#)
