

Replacing Lenovo Yoga Tablet 2 830F or 851F Battery Pack

Replacing the battery when the tablet is no longer charging.

Written By: Raphael Hinterndorfer

INTRODUCTION

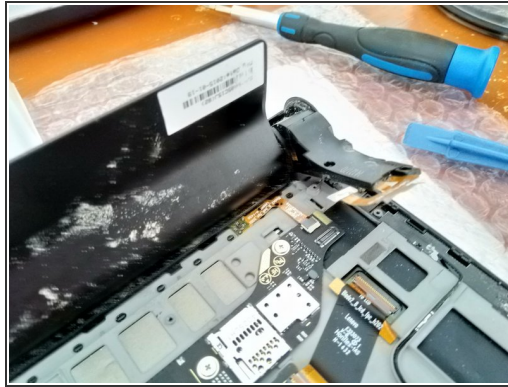

First remove the old battery and read the type and then order the new battery. The repair manual is also suitable for the Windows version Lenovo Yoga 2 851F.

TOOLS:

- [iFixit Opening Picks \(Set of 6\)](#) (1)
 - [Phillips #000 Screwdriver](#) (1)
-

Step 1 — Remove cover and headphone jack

- To remove the cover and the headphone jack, follow the instructions of this [guide](#).

Step 2 — Removing the Battery Housing

- Disconnect the battery ribbon cable.
- Using a flat object, squeeze the battery bracket on the side of the headphone jack out of the bracket. It should be a robust flat object as some force is needed to get the battery out. **Using too much force can damage the case.**
- **Carefully** pull out the battery ribbon cable together with the battery.

Step 3 — Removing the battery from the housing

- Remove the screw cover on the ribbon cable side (**the cover is stuck**).
- Remove the screw and cover. The cover is wedged in on one side and therefore you need some patience to get the cover out.
- The old battery can then be replaced. Pay attention to the **type designation** of the old and new battery when replacing it.

Repeat the steps in order to reassemble your device.
