

Toshiba Satellite C55-B5302 Monitor Screen Replacement

How to replace a Toshiba Satellite C55-B5302 screen.

Written By: Ebin Daniel

INTRODUCTION

These are the steps for removing the monitor screen from your Toshiba Satellite C55-B5302 laptop. Before starting, make sure you have your Phillips size #0 screwdriver and a systematic way to keep all the unscrewed screws as there are going to be a large number of them with different dimensions. Since we will be working in close proximity with the monitor screen, you should be careful not to scratch it.

TOOLS:

- [Phillips #0 Screwdriver](#) (1)
 - [Phillips #00 Screwdriver](#) (1)
 - [iFixit Opening Tools](#) (1)
 - [Metal Spudger Set](#) (1)
-

Step 1 — Battery

- Flip laptop upside down so you can see the screws.

Step 2

- Using the Phillips #0 screwdriver, remove the two 7 mm screws from the back casing.

Step 3

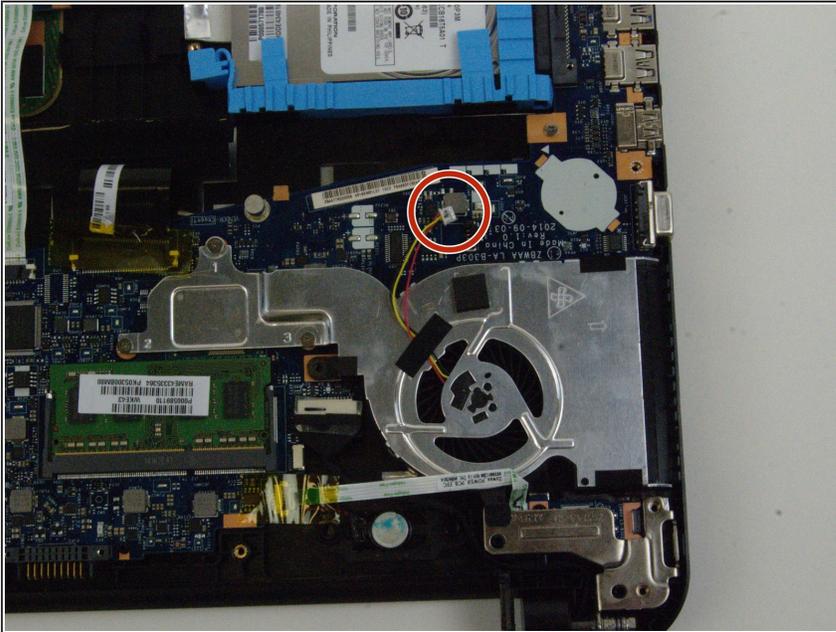

- Pull the battery from the back of the laptop for removal from the laptop.

Step 4 — Fan

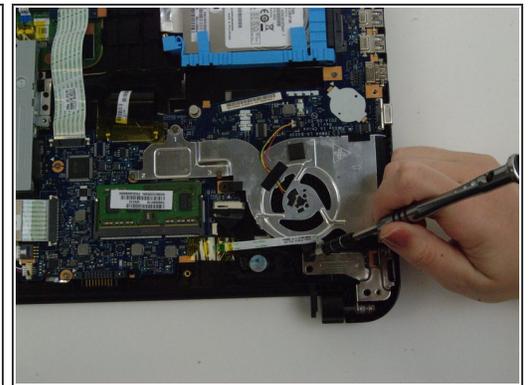

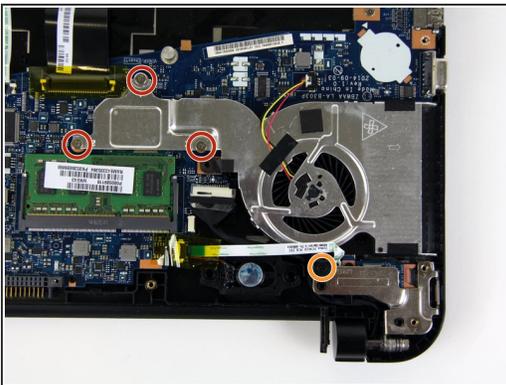

- Remove the remaining 7 mm screws on the back panel of the laptop with a Phillips #0 screwdriver.
 - Use the plastic opening tool to pry up a corner of the back panel and continue to pop the back panel off.
- i** Expect to hear popping as you pull the back panel off.

Step 5

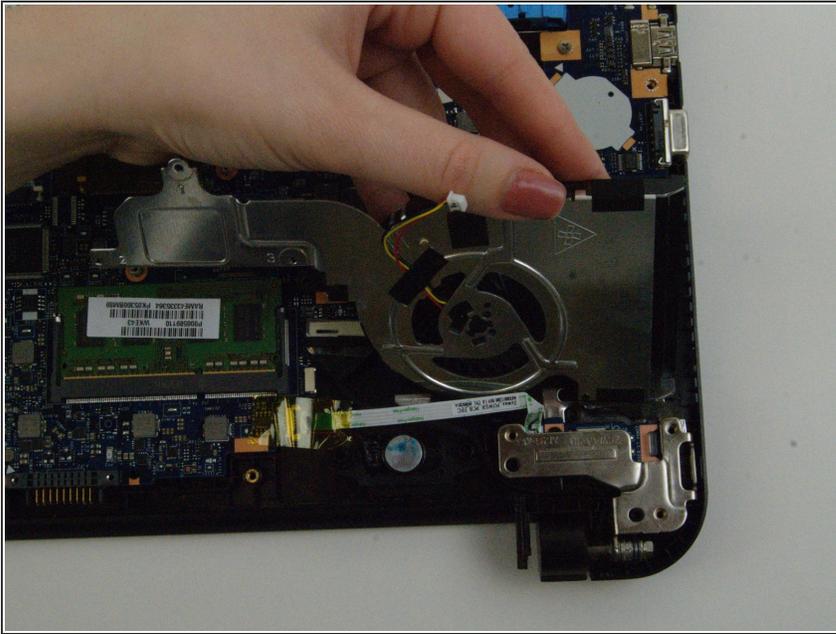

- Disconnect the fan wire from the motherboard.

Step 6

- Remove the three 3 mm screws with a Phillips #00 screwdriver.
- Remove the 5 mm screw with a Phillips #0 screwdriver.

Step 7

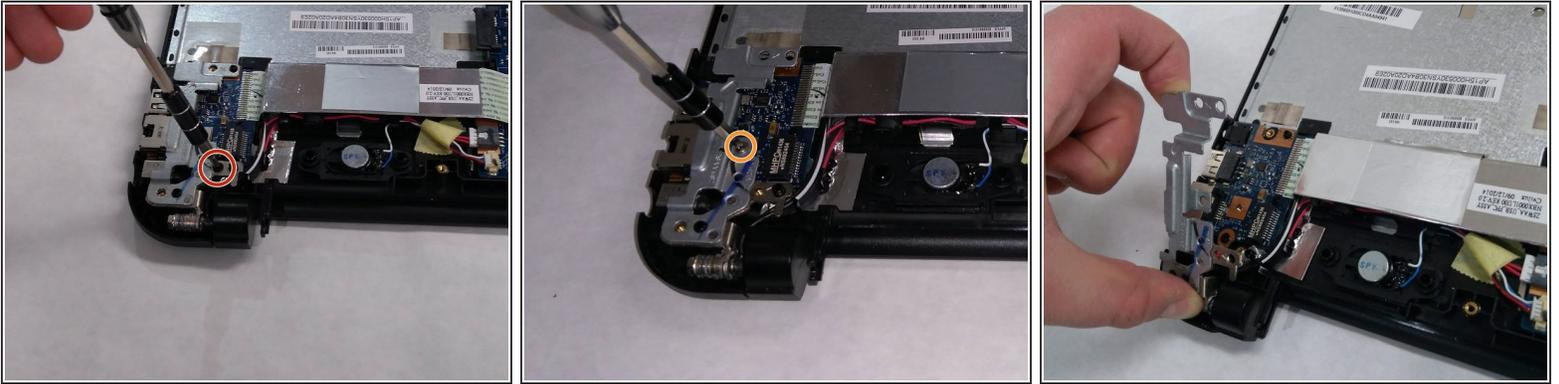

- You can now lift the fan out of the laptop.

Step 8 — Screen Bezel

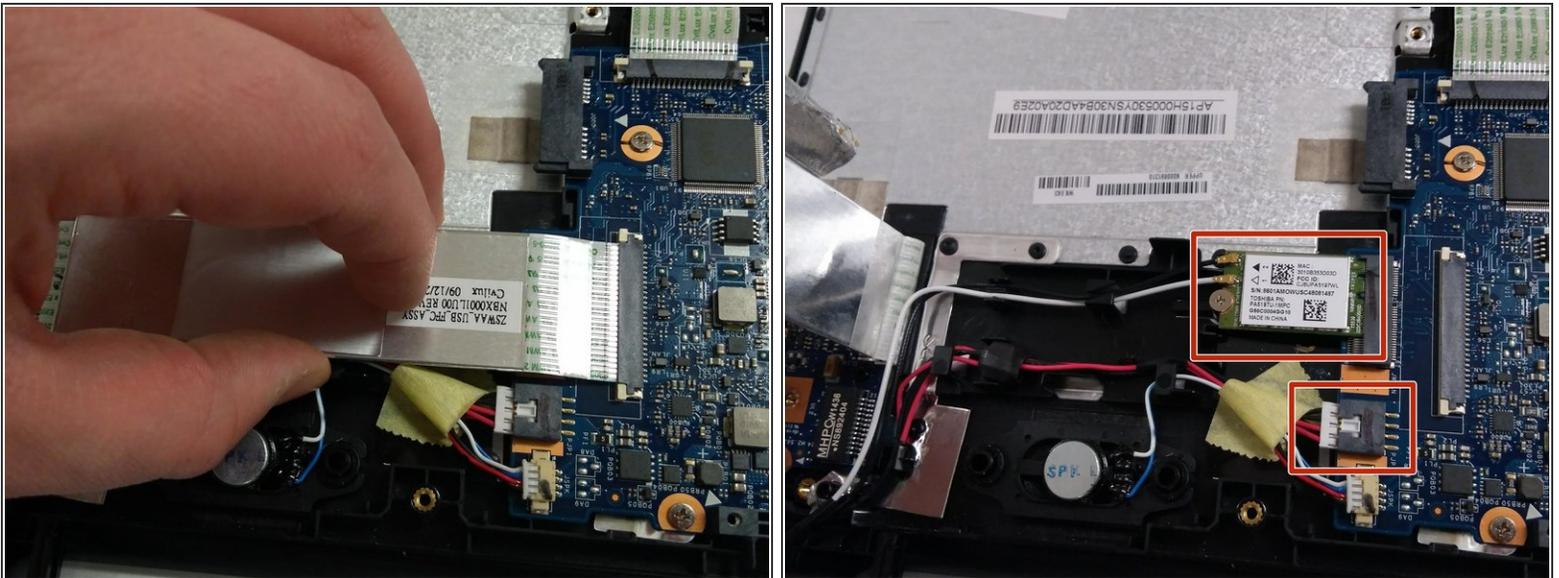

- After the fan has been removed, lift the hinge so as to get access to the parts below it.
- Remove the the black colored cable that is now exposed.

Step 9

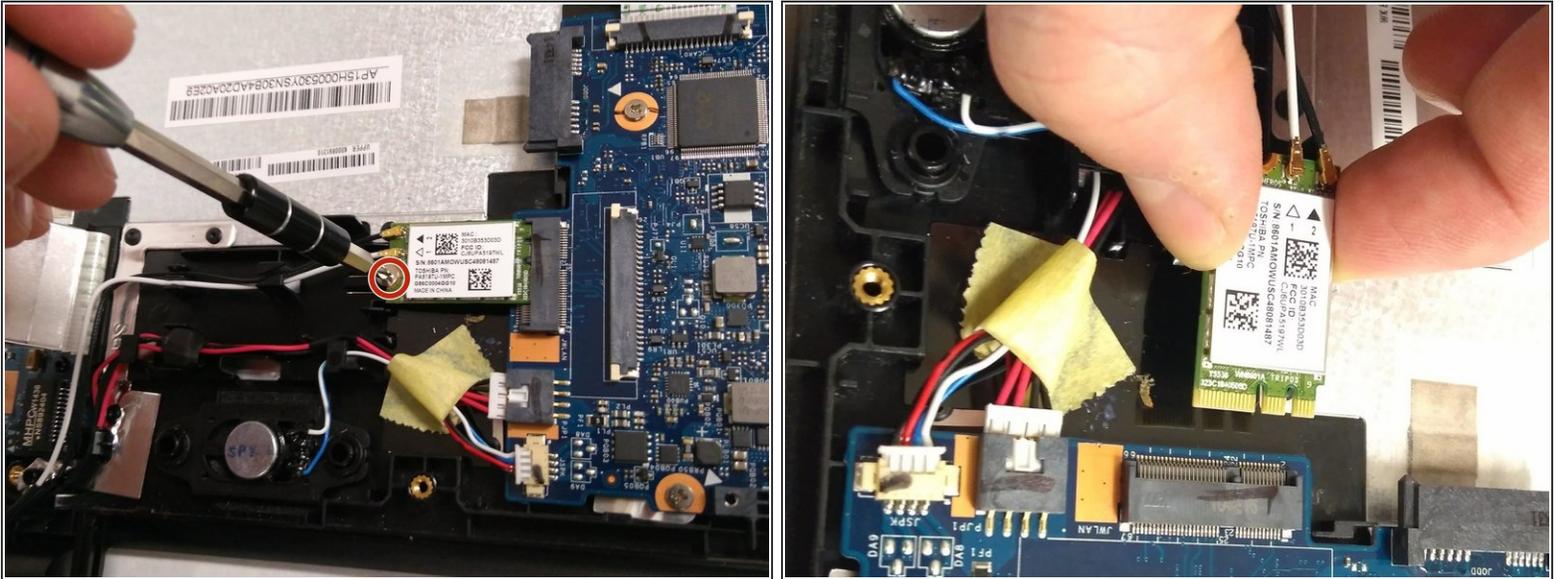

- Remove the 7 mm Phillips #0 screw on the other hinge.
- Remove the 3.1 mm Phillips #0 screw on the the same hinge.
- Lift the hinge up and towards you.

Step 10

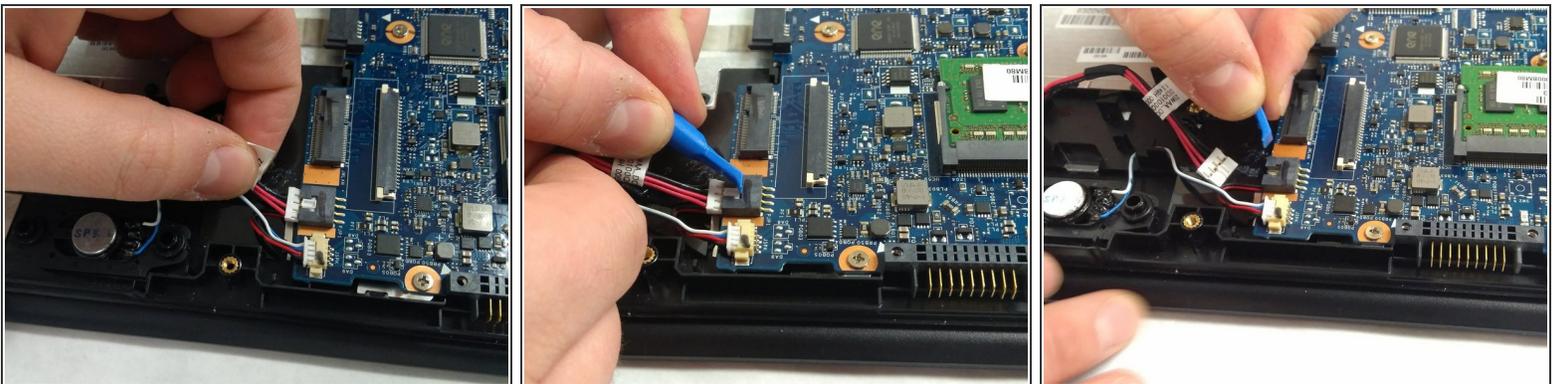

- Pull out the wide cable to reveal the components underneath.

Step 11

- Remove the 3.1 mm Phillips #0 screw holding the chip in place.
- Pull out the chip.

Step 12

- Hold the cable that is to be removed.
- Use an iFixit opening tool to push down on the white protrusion of cable connector.
- Now you can pull out the cable.

Step 13

- Pivot and lift up the monitor and separate it from the base of the laptop.

Step 14

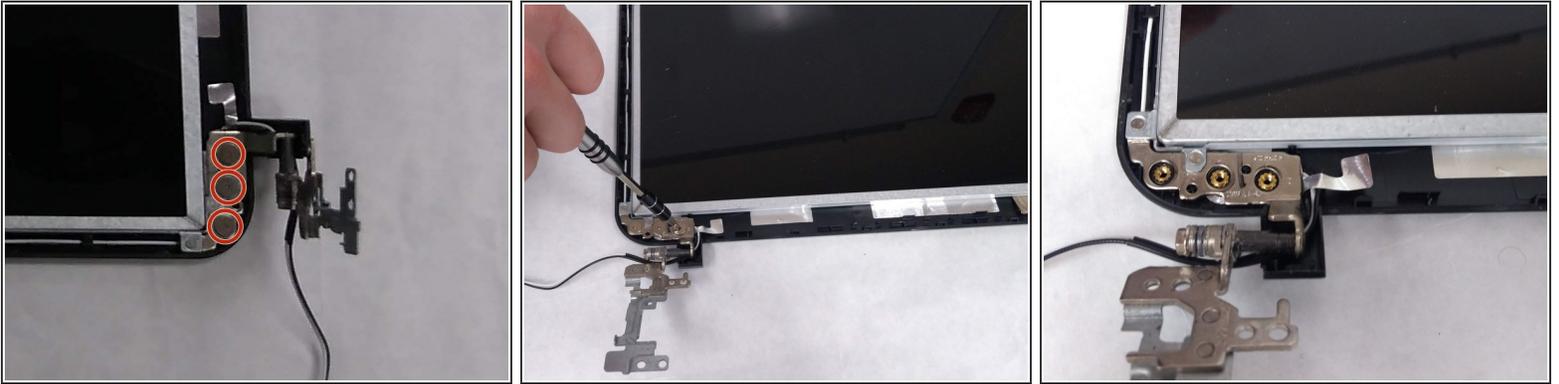

- Use an iFixit opening tool to separate the two halves of the bezel starting at both the plastic hinges.
- Use the metal spudger to separate the rest of the bezel.

 Be careful not to scratch the screen with the metal spudger.

 You may hear some sounds as the clips on the bezel disconnect from the back cover. This is normal.

Step 15 — Webcam

- Remove the three 4.1 mm Phillips #0 screws attaching each hinge to the screen.

Step 16

- Remove the two 3.1 mm Phillips #0 screws at the top of the screen.

Step 17

- Pull up on and turn over the screen to expose the wire connecting the webcam to the screen.

 Be careful not to pull up on the screen too far and damage the wire.

Step 18

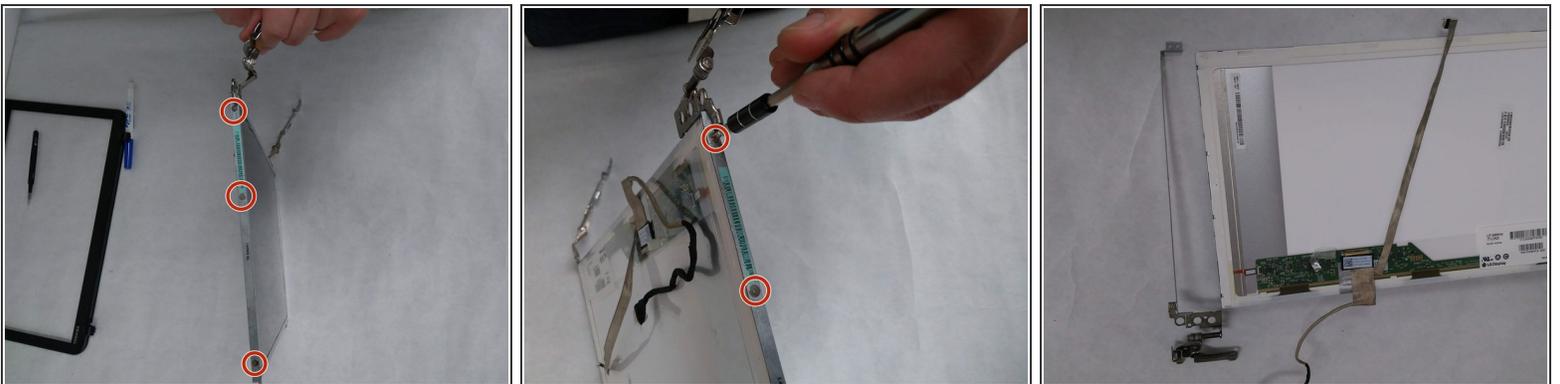

- Once the screen has been detached and turned over, remove the webcam from its place on the bezel.

Step 19

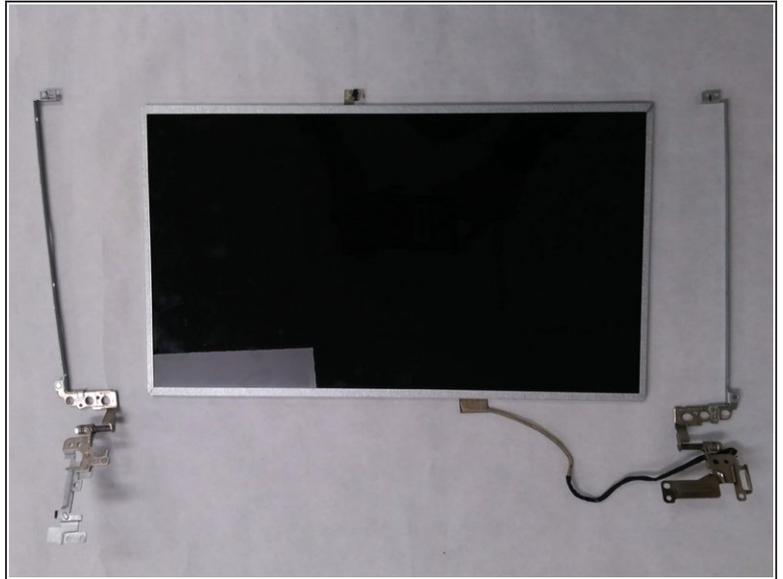

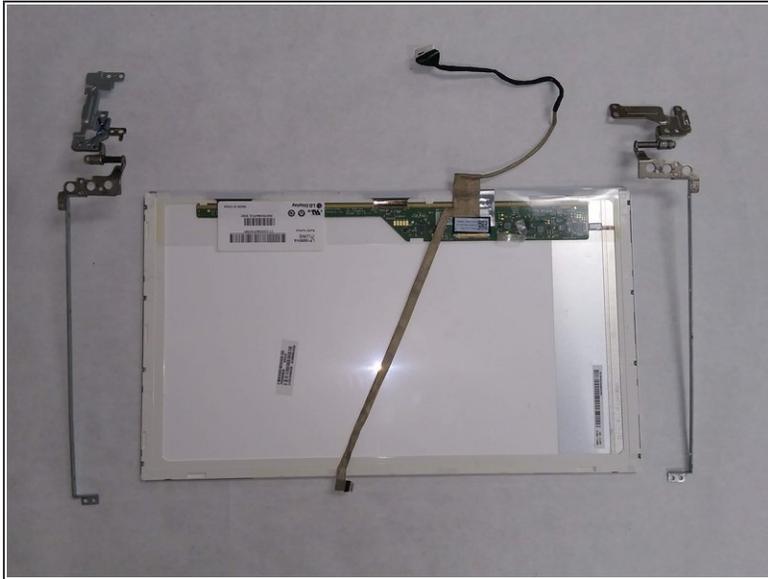

- Carefully, take off the tape connecting the webcam to the circuit board using a set of tweezers.
- Once the tape has been removed, you can disconnect the webcam from the wire completely.

Step 20 — Monitor Screen

- Have the screen along with the metal hinges stand upright on one side.
- Remove the three 3 mm Phillips #0 screws from the metal frame attached to the hinge.
- Separate the metal frame from the rest of the screen.

Step 21

- Repeat the previous steps to separate the metal frame on the other side.

To reassemble your device, follow these instructions in reverse order.
