Step 1 — Remove the battery

- Close the laptop and flip it over.

- Slide the release pin to pop the battery.

- Remove the battery completely.
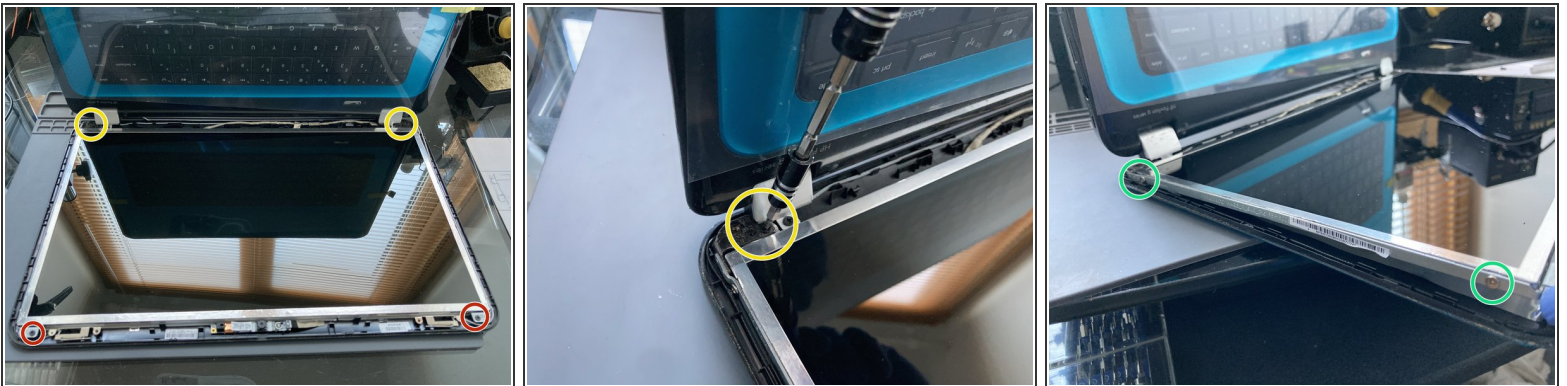

Step 2 — Remove the screw covers

- Open the laptop and locate the screw covers.

- Remove the screw covers at the bottom of the screen with tweezers.

- (i) Keep them somewhere safe as you will need to stick them back after the repair.
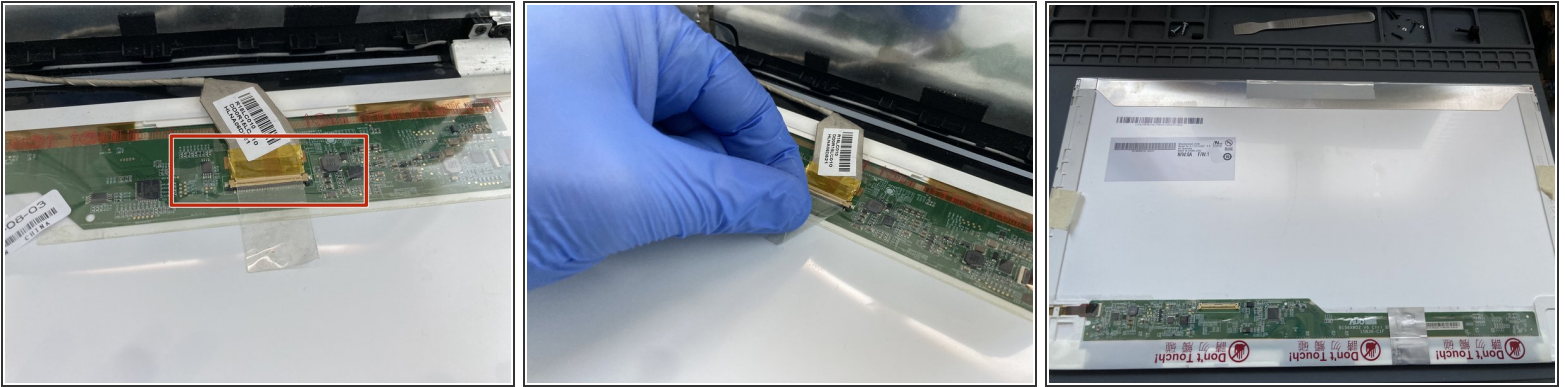

Step 3 — Remove the plastic frame

- Unscrew the exposed 2 x Philips screws and set them aside.

- Starting from the top, pry up the plastic frame with your fingernails or a pry bar.

- ⚠ If you are using a pry bar, it can scratch the screen. Apply gentle pressure until the plastic frame pop out all around the frame. Don't force it!

- Finally, remove the frame.

Step 4 — Release the screen from the frame

- Remove the black Philips screw from the top on each side.

- Remove the bottom screw from the hinge to make an easier access to the screws on the side of the screen.

- Now that the frame is loose, you can remove the 4 x Philips screws holding the screen in the frame.

Step 5 — Disconnect the screen connector

- Turn the laptop back up and carefully tilt the screen out from the frame and rest it on the keyboard.

⚠️ Don't try to fully remove it yet as it is still attached to the motherboard by the screen cable!

- Gently lift up the adhesive and disconnect the screen connector. That is the screen released and ready for a change for a new one.

Step 6 — Check the model number before ordering

- Before ordering a new screen make sure that you order the correct model number that is compatible with your old screen.

- Check the cable connector to make sure you order the correct screen with the correct number of pins.

To reassemble your device, follow these instructions in reverse order.
