

# How to Unclog a Keurig K-Classic Coffee Maker

This guide will help someone unclog their Keurig K-Classic Coffee maker with the tools of just a bobby pin and white vinegar.

Written By: Addison Gordon

## INTRODUCTION

Using your Keurig K-Classic very frequently may start to cause build up of coffee grounds in the dispensing area. This causes you to get less out of your Keurig and a less amount of coffee to take on your daily activities.

These 8 steps can help you revive your Keurig K-Classic, with low budget materials which means less coming out of your pocket. Before starting, make sure you have set aside an hour to complete the task. This is including the wait time of 45 minutes for your Keurig to stay at rest.

Before starting this procedure, make sure you are able to easily connect and disconnect your Keurig to a power source as well as be near a sink for disposal.

### TOOLS:

- [Bobby pin](#) (1)
- [Distilled White Vinegar](#) (1)
- [Keurig K-Classic](#) (1)

### PARTS:

- [Keurig Water Filter](#) (1)
- [Keurig Water Reservoir](#) (1)

## Step 1 — How to Unclog a Keurig K-Classic Coffee Maker

- Unplug the Keurig and take off the water reservoir.

## Step 2

- Empty out the water reservoir, then remove the water filter.

### Step 3

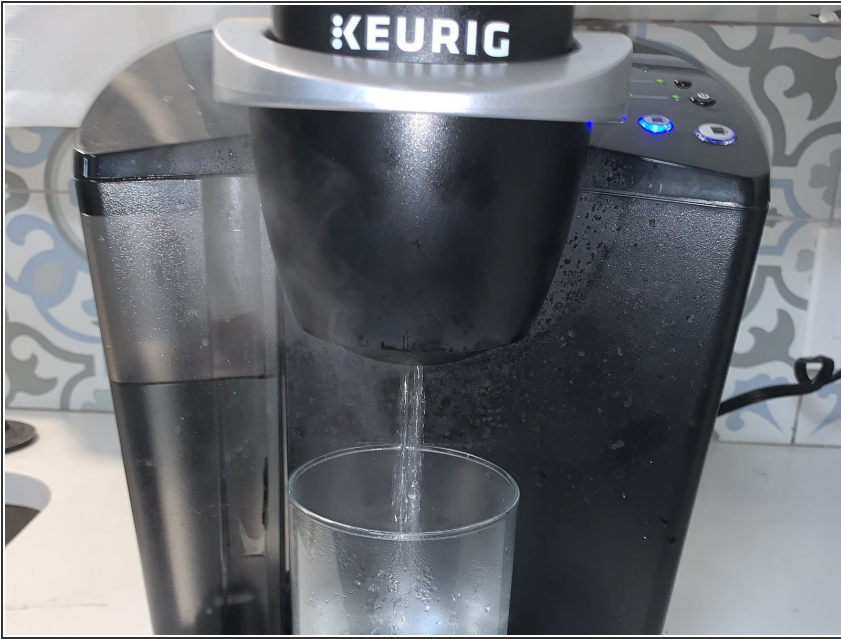

- Use a bobby pin to clean the bottom of the dispenser.

### Step 4

- Fill the water reservoir about halfway with white vinegar, then fill the rest of the water reservoir with water.

## Step 5

- Plug in the machine and run without a K-cup, then start brewing.

## Step 6

- Let the machine rest for 45 minutes to soak.
- ⓘ The power can be left on.

## Step 7

- Remove the water reservoir and rinse out with fresh water to remove any leftover vinegar.

## Step 8

- Place the water filter back in the water reservoir.
- Place the lid back on top of the water reservoir, and insert entire part back on the Keurig.
