INTRODUCTION

Prerequisite only

🔧 TOOLS:

- Spudger (1)
- Phillips #1 Screwdriver (1)

This document was generated on 2020-11-28 03:05:13 AM (MST).

Step 1 — Battery

- Power-off the netbook fully before attempting to remove the battery.

- Flip your netbook upside down, and locate the sliding tabs near the battery.

- Slide both tabs inward so that the battery visibly moves away from the case of the computer.

- Release the tabs and pull the battery out.

Step 2 — Memory Card Cover
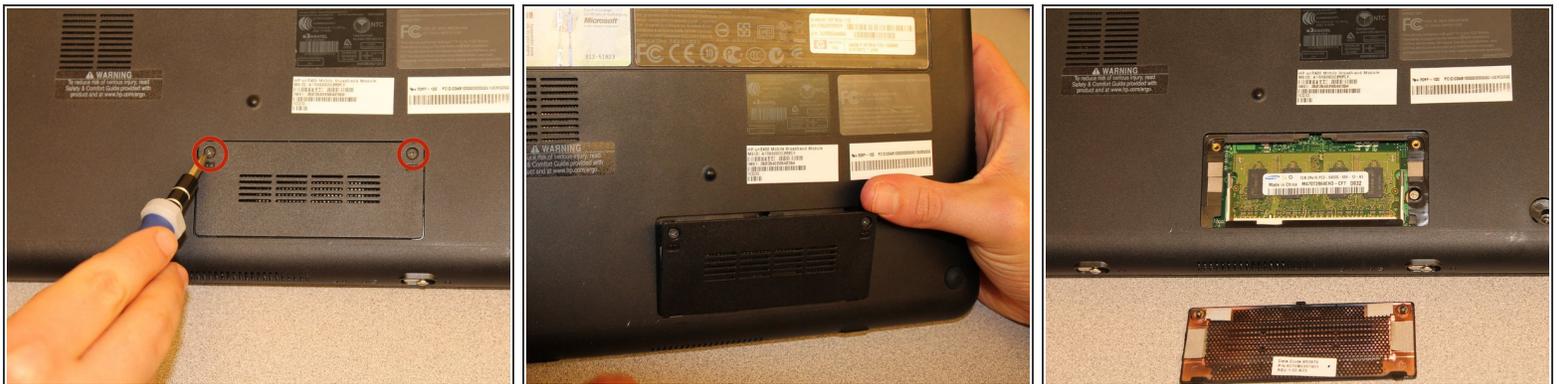

- Flip the netbook over so you are looking at the bottom, and locate the two screws that hold the memory card cover.

- Next, take a Phillips PH1 screwdriver and unscrew the two screws.

  (i) These screws will not release from the cover once they are unscrewed.

- If necessary, use the flat end of the spudger to assist in prying the cover away from the computer.
