

# Xbox 360 Wireless Controller Triggers Replacement

Trigger replacement.

Written By: Brett Hartt

---

## INTRODUCTION

Fire away by replacing the triggers on your Xbox 360 Wireless Controller.

---

### TOOLS:

- [Spudger](#) (1)
  - [T8 Torx Security Bit Screwdriver](#) (1)
  - [Tweezers](#) (1)
-

## Step 1 — Battery

- Depress the battery release button on the top of the controller.
  - Remove the battery holder from the controller.
- i** The standard option for Xbox 360 Wireless Controllers Battery Packs is AA batteries. A rechargeable battery is also available, but both battery options are removed from the controller in the same way.

## Step 2 — Rear Case

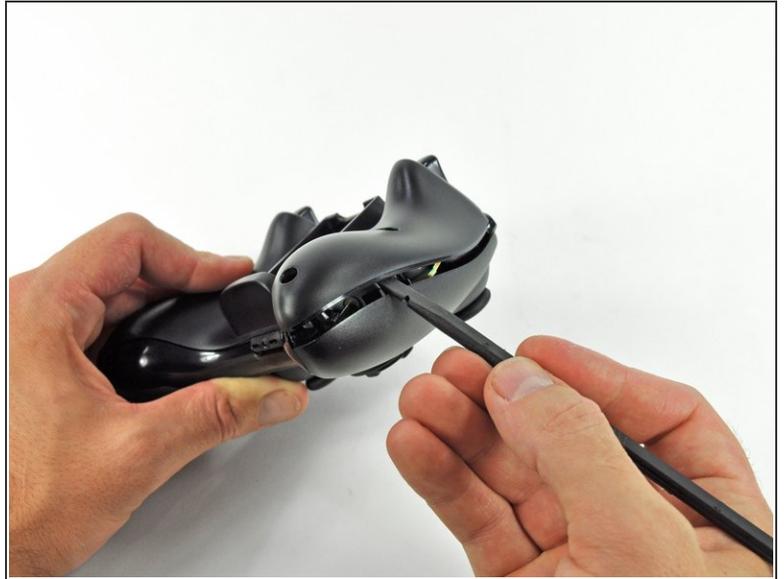

- Use a pair of tweezers to peel the barcode sticker from the battery compartment.

## Step 3

- Remove the seven 9.3 mm T8 Security Torx screws securing the rear case to the front case.

## Step 4

- Insert a [Spudger](#) between the front and rear cases along the left edge of the controller.
- Rotate the spudger toward the front of the controller, prying the two cases apart.

## Step 5

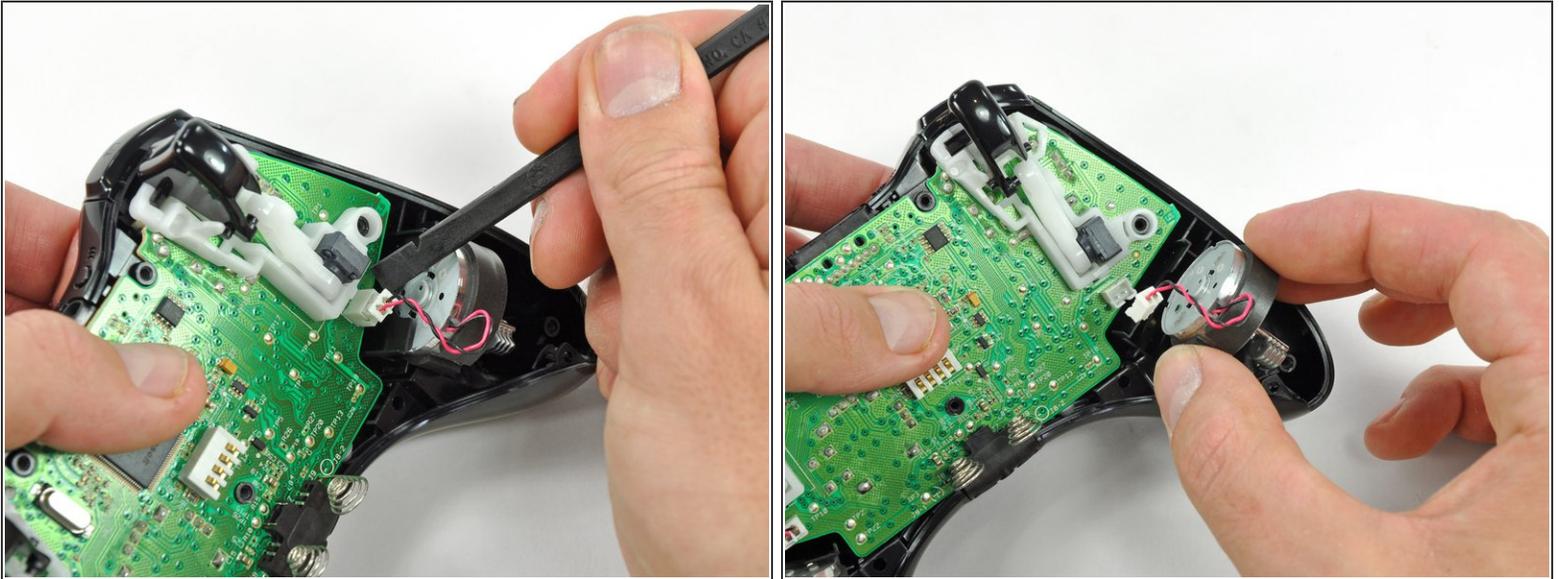

- Insert a spudger between the front and rear cases, near the headphone jack.
- Rotate the spudger toward the front of the controller to pry the two cases apart.

## Step 6

- Grasp the controller by the battery compartment and the headphone jack.
- Lift the battery compartment away from the headphone jack, separating the rear case from the front case and logic board.
- ☞ The battery contact springs are held in place by slots in the battery housing in the rear case. Be sure to realign them properly during reassembly.

## Step 7 — Vibration Motors

- Use the flat end of a spudger to remove the vibration motor cable, moving it upward from its socket on the logic board.
- Lift the vibration motor out of the front case.

## Step 8

- Remove the vibration motor from the other side of the controller using the same method previously described.
- ⓘ The **left motor** has significantly more counterweight than the right motor.

## Step 9 — Logic Board

- Lifting from the headphone jack and power plug, remove the logic board from the front case.

## Step 10 — Triggers

- Using your thumb and forefinger, push the left trigger toward the right side of the controller. Simultaneously push the trigger control arm in the opposite direction.
- ☞ The trigger has a peg that fits into a slot in the trigger arm. Be sure to push far enough so that the peg clears the slot.
- Push the trigger arm downward.

## Step 11

- Insert the edge of a spudger in between the trigger and the trigger assembly near the left edge. Pry the housing away from the catch on the trigger.
- Using the previously described technique, pry the housing on the right edge away from the trigger.
- Rotate the trigger away from the logic board, past its housing.

## Step 12

- Using a spudger, pry the trigger spring off its peg on the trigger housing.
- Pull the trigger spring out of the trigger.

## Step 13

- Slide the trigger toward the right side of the logic board, and rotate it clockwise.
- Remove the right trigger from the logic board.
- ⓘ To remove the left trigger from the logic board, follow the procedure previously described for the right trigger.

To reassemble your device, follow these instructions in reverse order.
