## TOOLS:

- [Phillips #0 Screwdriver](#) (1)
-

## Step 1 — Pentax Optio WG-1 GPS

- Clean the device. You are able to rinse with under running water. It is recommended to ensure that you remove the battery and memory card before working with the device.
- Prepare a clean workstation and have your tool(s) ready.

## Step 2

- Remove 4 Phillips 1/4 inch 00 screws around the border of the display with the screwdriver.

### Step 3

- Remove the black rubber adhesive around the border of the device by peeling slowly.

### Step 4

- Remove 2 Phillips 00 1/4 inch rubber sealed screws off the top of the camera.

## Step 5

- Remove the display screen from the casing. When opening, the micro USB cover and the battery cover will fall out with a pin.

## Step 6

- Remove all orange strips located on the motherboard and the LCD screen.

⚠ Lift black latches before removing the strips.

## Step 7

- Remove the lens from the camera carefully. It is the black block held inside the casing.

## Step 8

- Remove 3 Phillips 00 screws from the motherboard.

## Step 9

- Remove 2 Phillips 00 screws from the mini USB bay.

## Step 10

- Remove 2 Phillips 00 screws from the silver handle on the side of the camera.

## Step 11

- Remove 3 Phillips 00 screws from the camera's photo capture button.
- After removing those screws, remove the plastic piece and buttons they secure.

## Step 12

- Remove 3 Phillips 00 screws from the same location located under the camera's photo capture button.

## Step 13

- Remove the motherboard from the housing.

To reassemble your device, follow these instructions in reverse order.
