## Step 1 — Battery

- ⓘ Before you begin, be sure to turn off your laptop and discharge the battery down to 25%.
- Use a Phillips screwdriver to remove the 15 screws securing the back cover.
- Insert an opening tool or spudger in the seam and pry along the perimeter to loosen the back cover.
- ⚠ Do not insert the opening tool too far into the back edge (with "Stealth" written on it), or you may damage the power LED.
- ⓘ The back cover is secured with clips. Too much pressure from the spudger can break the clips, but some flex is not dangerous.
- Remove the back cover.

## Step 2

- Disconnect the battery by carefully pulling its connector towards the battery.
- ⚠ Pull parallel to the battery, not straight up.

## Step 3

- ⓘ The battery is attached to the laptop with a strong adhesive.
- Lift the battery from laptop.
- ⚠ Be careful not to bend the or puncture the battery, as that may cause a fire hazard.

To reassemble your device, follow these instructions in reverse order.
